### **DETAILED ACTION**

Claims 1-22 are pending in this application.

#### ***Oath/Declaration***

The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

It does not identify the mailing or post office address of each inventor. A mailing or post office address is an address at which an inventor customarily receives his or her mail and may be either a home or business address. The mailing or post office address should include the ZIP Code designation. The mailing or post office address may be provided in an application data sheet or a supplemental oath or declaration. See 37 CFR 1.63(c) and 37 CFR 1.76.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 6, 12, 13, 17, 19, 21 and 22 are rejected under 35 U.S.C. 102(e) as being anticipated by Kastan et al. US 6,387,640 B1.

Kastan et al. teach expression systems that employ cloning vectors containing genes encoding wild-type ATM and chimeric fusions of FLAG and ATM (column 12, line 35-51). The expressed protein is intended for ATM kinase activity and is thus functional (column 11, line 58-67). Preferred vectors are viral vectors such as vaccinia (column 20, line 25-29). As described in example 1, the FLAG tag is utilized for immunoprecipitation of ATM with M2 monoclonal antibody following transfection of 293T cells with a cloned ATM gene (column 31, line 2-22).

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 4 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Since the ATM plasmid pSCAT is essential to the claimed invention, it must be obtainable by a repeatable method set forth in the specification or otherwise readily available to the public for the life of the patent. The invention does not recite use of any vaccinia vector containing ATM but instead specifically claims pSCAT. Neither the specification nor the prior art enables the skilled artisan to duplicate the pSCAT plasmid and therefore, applicants must themselves deposit the specific pSCAT recited in the claims and thus satisfy the deposit requirements under 37 CFR 1.801-1.809 (see enclosed Suggestion for deposit of biological material).

Art Unit: 1636

Claims 1, 2, 4, 6, 12, 13, 17, 19, 21 and 22 are rejected.

Claims 3, 5, 7-11, 14-16, 18 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
